| Wyoming | 230,300 | 116,900 | 7,000 | 2,000 | (B) | (B) | 14,320 | (B) | (B) | (B) |

NOTE: In dollars. Estimates are conditional on asset ownership. Sample excludes group quarters and households in which the household reference person was either living outside the United States in December, living in institutionalized group quarters in December, or was living in a non-permanent accommodation in December. (B) - Base is less than 200,000 households, or sample size less than 50. Estimates rounded to four significant digits. Interpolated medians used to calculate statistics. The Census Bureau's Statistical Quality Standards indicate that serious data quality issues related to sampling error occur when the estimated coefficients of variation (defined as a standard error divided by its point estimate) for the majority of the key estimates are larger than 0.3. While this table package meets the Statistical Quality Standards, use caution with estimates having coefficients of variation larger than 0.3 in absolute value as they may suffer from data quality issues. Standard errors for point estimates in this table are in Table 1A. The estimates in this table are based on responses from a sample of the population and may differ from the actual values because of sampling variability and other factors. As a result, apparent differences between the estimates for two or more groups may not be statistically significant. For information on sampling and nonsampling error see: <https://www.census.gov/programs-surveys/sipp/methodology/sampling.html>. For technical documentation and more information about SIPP data quality, please visit the SIPP Technical Documentation page at <https://www.census.gov/programs-surveys/sipp/tech-documentation.html>.
